question: Three bags contains a no of red and white balls as follows:

B_1: 3 red balls,B_2:2 red balls and 1 white ball,B_3:3 white balls

The probability that bag i will be chosen and a ball is selected is i/6,i=1,2,3.

what is the probability that

(i) a red ball will be selected?

(ii) a white ball will be selected?

Solution:

object	RV	values	description
bag	X	1	bag-1 is selected
		2	bag-2 is selected
		3	bag-3 isselected
ball	Y	0	white ball is selected
		1	red ball is selected

TABLE 0: random variables of objects

$$\Pr(X=1)=\frac{1}{6} \tag{1}$$

$$\Pr(X=2)=\frac{2}{6} \tag{2}$$

$$\Pr(X=3)=\frac{3}{6} \tag{3}$$

1) The probability that a red ball will be selected is:

$$\Pr(Y=1)=\Pr(X=1).\Pr(Y=1|X=1)+\Pr(X=2).\Pr(Y=1|X=2)+\Pr(X=3).\Pr(Y=1|X=3) \tag{4}$$

$$=\frac{1}{6}.\frac{3}{3}+\frac{2}{6}.\frac{2}{3}+\frac{3}{6}.0 \tag{5}$$

$$=\frac{7}{18} \tag{6}$$

2) The probability that a white ball will be selected is:

$$\Pr(Y=0)=\Pr(X=1).\Pr(Y=0|X=1)+\Pr(X=2).\Pr(Y=0|X=2)+\Pr(X=3).\Pr(Y=0|X=3) \tag{7}$$

$$=\frac{1}{6}.0+\frac{2}{6}.\frac{1}{3}+\frac{3}{6}.\frac{3}{3} \tag{8}$$

$$=\frac{11}{18} \tag{9}$$
